# Adding a copier to a Mac

Black/white model (BMFC) - Kyocera TASKalfa 4003i KX

Color model (CMFC) - Kyocera TASKalfa 4053ci KX

1. Open Mac system preferences and click on Printers & Scanners.

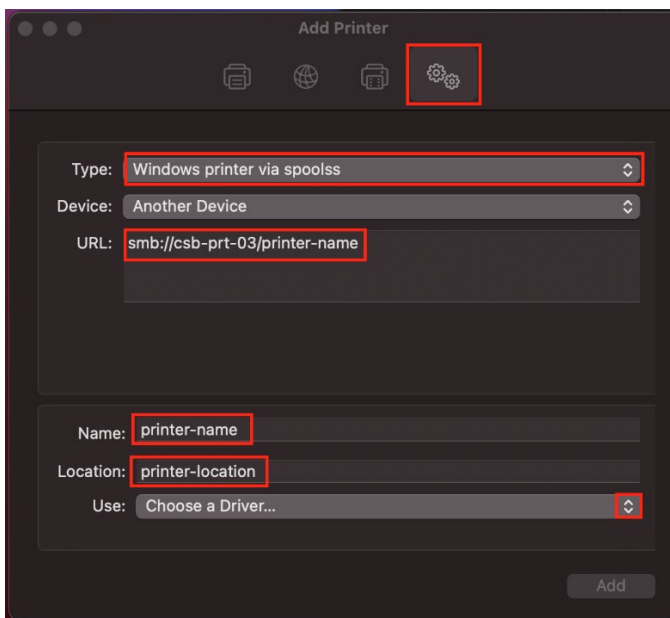

2. Click on the + to add a printer.

3. Right click on the toolbar and select Customize Toolbar. Skip to step 5 if Advanced is already on the toolbar.
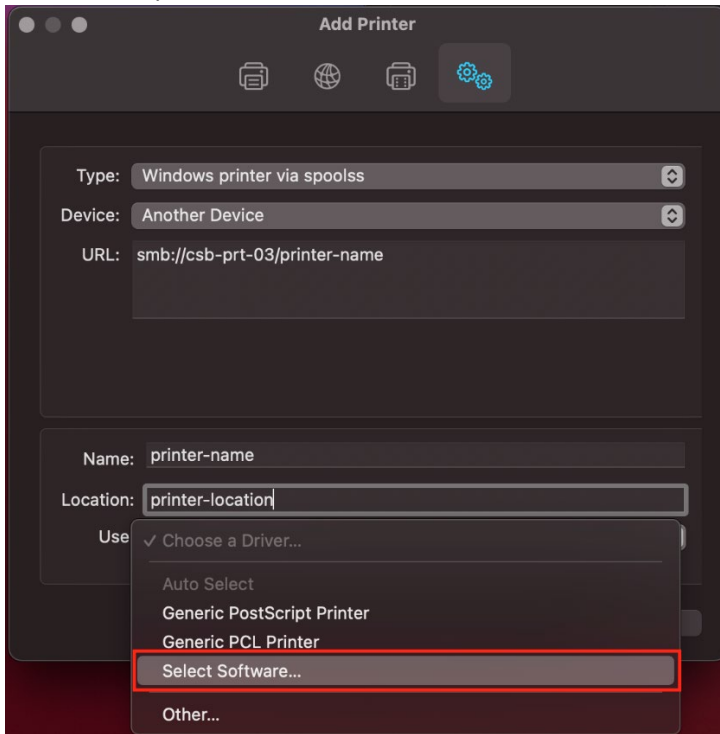

4. Drag the Advanced button to the toolbar, then click Done.

5. Click on Advanced.
   a. It may take a minute for the options to load.
6. Fill in the info for the printer.
   a. Select Windows Printer via Spools in the Type dropdown.
   b. Enter the network path to printer after the smb:// in the URL box.
      i. The network path will be csb-prt-03/printer-name
      ii. Printer-name is the building/room number followed by the printer type.
      iii. Printer type is BMFC for black/white copiers and CMFC for color copiers.
      iv. Example network path: csb-prt-03/HLS201-BMFC
   c. Enter a name for the printer, this is usually the same as printer-name from the network path. Example: HLS201-BMFC
   d. Enter a location for the printer, usually the room the printer is located in. Example: HLS201

7. Click the dropdown for Use and then click on Select Software.

8. Select the correct driver from list then click Ok.
   a. For the BMFC copiers select Kyocera TASKalfa 4003i (KPDL).
   b. For the CMFC copiers select Kyocera TASKalfa 4053ci (KPDL).
   c. If the drivers do not show in the list, the latest driver package can be downloaded from Kyocera.
      i. Kyocera Driver Download. Download the Mac Print Driver and install to get the latest drivers.

9. Click Add to add the printer.

10. Wait for the Setting up 'Printer-name…' screen to appear. When it does, set the following options. Then click Ok.
    a. Paper feeders set to Cassettes 3, 4.
    b. Document finisher set to 1000-sheet finisher.
