											(avg)		

**Column A**

Total possible hours for space is calculated by taking the total possible hours for the report period (O) defined by the user report parameters and subtracting the total blackout hours for the space during that same time period.

**Column B & C**

Maximum Capacity and Fill Ratio are values entered in the Maximum Capacity and Default Fill Ratio fields of the edit Space form. The space utilization computations cannot be made where no value is entered into Maximum Capacity.

**Column D & E**

Registered Head Count and Expected Head Count are values entered into the Expected and Registered Head Count fields on the R25 Edit Event form. If no values have been entered into these fields for an event, then some of the space utilization calculation on this report cannot be made for that event.

**Column F**

Selected Head Count is the value used in all subsequent report calculations that require a head count. The selected head count will be the registered head count for an event if defined. If the registered head count is not defined for an event, the selected head count will be the expected head count. If the report parameter (Sum Bound Head Count) is checked, the selected head count will be the sum of all overlapping bound event head counts.

**Column G**

Hours per Meeting is the duration in hours for one occurrence of the event. The pad time is added to the event end time and occurrence times are adjusted to fit within the report parameters prior to calculating the duration. When adding the pad time to the end time of an occurrence, the result will not be allowed to overlap any other event in the same space or extend beyond the report end time.

**Column H**

Number of Meetings is the number of times this event occurs during the report period.

**Column I**

Total Hours Used is the total number of hours for all occurrences of this event during the report period. This is the product of (column G), Hours per Meeting, and (column H), Number of Meetings.

**Column J**

Contact Hours is the product of (column I), Total Hours Used, and (column F), Selected Head Count.

**Column K**

Time Utilization is the percentage of hours that the space is used for this event during the report period compared to the total hours for the space in the report period. This is the quotient of (column I), Total Hours Used, divided by (column A), Total Hours for Space. This value is expressed as a percentage.

**Column L**

Class Seat is the percentage of seats used for each occurrence of an event compared to the Maximum Capacity of the space. Class Seat Utilization is calculated by taking (column F), Selected Head Count, divided by (column B), Maximum Capacity, multiplied by 100. This value is expressed as a percentage.

**Column M**

Station Utilization is the percentage of actual total contact hours compared to the total contact hours possible for the space during the Report Period. The total possible contact hours is the (column B), Maximum Capacity, multiplied by (column A), Total Hours for Space. This value is expressed as a percentage.

**Column N**

Net Utilization is the product of Time Utilization and Station Utilization. This value is expressed as a percentage.

**Column O**

The Total Hours per Report Period (O) is computed from the date and time range entered when the report was printed.
