## SBCCD Phone/Tablet E-mail Setting

iPhone/iPad – just remove the account and re-add it. It should pick up the settings auto-magically.

Android – New settings:
- Server: outlook.office365.com
- Domain\username: sbccd\@sbccd.cc.ca.us
- You will get a prompt to "Activate device administrator?" Similar to the one below. This can be scary, as it basically says that SBCCD can wipe all of your phone's data. This is usually only used when your phone gets stolen. If this is a problem, then I recommend you don't add your email to your phone.
